Regulatory Inventory: A Tool to Support Communities in Developing Energy Projects

European Commission

Regulatory Inventory

- The Regulatory Inventory is a structured knowledge database developed by the Clean Energy for EU Islands Secretariat during the 2021–2022 period.
- The inventory is currently being updated to reflect changes post-July 2021.

https://clean-energy-islands.ec.europa.eu/regulatory-inventory

- It covers 15 EU Member States with inhabited islands and maps out the legislation and regulations that affect the development of local decarbonised energy systems.

- Topics covered include:
  - RE support schemes for electricity, heating & cooling and transport and permits and authorisation processes
  - Grid connection procedures and policies (with attention to non-interconnected systems)
  - Energy efficiency policies
  - Other clean energy-supporting policies
  - Regulations on energy communities, energy sharing, and prosumers
  - Relevant authorities and other organisations

Data collection – per country

Croatia

Cyprus

Denmark

Germany

Greece

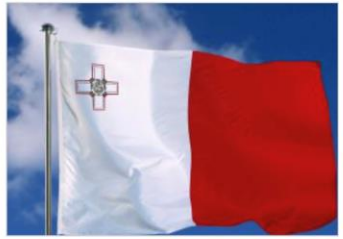
Ireland

Estonia

Finland

France

Italy



Malta

Portugal

Spain

Sweden

The Netherlands

Each MS fiche contains:

General information about the country and its islands
Clean energy national targets
List of islands selected for 30 for 2030 – contains island facts and planned activities on the island

In addition:

Regulatory factsheet (state-of-play inventory of legislation and regulation)
Study on regulatory barriers (findings and recommendations)
Booklet summarising the barriers and recommendations

Regulatory information (per topic)

- If there is a specific regulatory framework for islands (different from the national one) a separate section has been introduced.

European Commission

Regulatory information

Decarbonisation Action Support

Electricity Grid Policies (Grid- E)

Community Energy Framework

Other clean energy supporting policies

Relevant energy sector stakeholders

Permits and Authorisation Processes

European Commission

Decarbonisation action support

This section contains information on measures for:

1. **Electricity support**
2. **Heating and cooling support**
3. **Transport support**

Each sub-section lists:

- the legal source introducing the measure
- the description of the support schemes
- addressees of the measure
- the procedure
- competent authorities responsible
- sectors to which the measure applies

European Commission

Electricity Grid policies (Grid-E)

This section is new compared to the 2021 version

Contains sub-sections on:

Grid-E Overview
Grid-E Connection
Grid-E Use
Additional Grid-E aspects

European Commission

Community Energy Framework

Contains a summary of regulations in connection with:

- **Energy sharing**
- **Energy communities**
- **Prosumers**

Other clean energy supporting policies

- Provides an overview, summary of policies for RES as well as competent authorities
- Each specific policy (measure) is detailed with information on the legal sources, addresses and the respective authority responsible for its implementation

Relevant energy sector stakeholders

The section lists the authorities in the energy sector providing:

- the full name of the authority (in English and local language)
- the link to the website of the authority
- abbreviated name of the authority

Permits and authorisation procedures

The section provides:

- An overview of the permits and authorisation for RES
- Sequential order for the procedure
- Competent authorities
